

STATE OF NEW YORK

6760--A

2025-2026 Regular Sessions

IN ASSEMBLY

March 12, 2025

Introduced by M. of A. WOERNER, KAY -- read once and referred to the Committee on Education -- committee discharged, bill amended, ordered reprinted as amended and recommitted to said committee

AN ACT to amend the education law, in relation to transition feasibility analysis for zero-emission school buses; and to amend part A of chapter 56 of the laws of 2023 amending the education law relating to contracts for excellence, in relation to the effectiveness thereof

The People of the State of New York, represented in Senate and Assembly, do enact as follows:

1 Section 1. Legislative findings. The legislature finds that feasibility
2 issues related to the pace of technological advances, the capacity
3 of the state's power grid, and the impacts of weather and other route
4 conditions on zero-emission school buses (ZEBs) operated throughout the
5 state present significant challenges to school districts working to
6 transition their fleets in accordance with the department of education's
7 (SED) first transition deadline of July 1, 2027. For that reason, this
8 legislation addresses two separate concerns with current law. First, it
9 examines the feasibility of each district's transition process. Second,
10 for those districts deemed to have the most feasible paths to transition,
11 the legislation directs SED, in conjunction with the New York
12 state energy research and development authority (NYSERDA) and the
13 department of health (DOH), to assess a defined group of district characteristics
14 to determine which districts shall receive prioritized
15 transportation and building aid for the purchase of additional transmission
16 capacity and/or ZEBs and the design and construction of related
17 infrastructure.

18 With respect to an individual district's ability to comply with the
19 existing mandate, the legislation directs SED to require all school
20 districts to complete a baseline transition feasibility analysis and to
21 repeat that process every five years. If a district's analysis determines
22 that more than 50% of the district's regular bus routes are not

EXPLANATION--Matter in italics (underscored) is new; matter in brackets
[-] is old law to be omitted.

LBD09808-06-5

1 deemed feasible for service by zero-emission school buses, then the
2 district may maintain its existing fleet status quo until its next tran-
3 sition feasibility analysis. On the other hand, if a district's analy-
4 sis determines that more than 50% of the district's regular bus routes
5 are serviceable by zero-emission buses, then the district must comply
6 with the existing transition timeline for the percentage of regular
7 routes deemed feasible and may maintain the status quo for the
8 district's remaining non-feasible regular routes until the district
9 completes its next transition feasibility analysis. The outer deadline
10 for districts with substantial feasibility challenges to transition
11 their fleets will be 2040.

12 Despite the multi-faceted transition challenges faced by some
13 districts, e.g., average low temperatures, topography and route distance
14 vary widely across the state and substantially impact manufacturer's
15 specifications and ZEB reliability, voters tend to focus exclusively on
16 the variable of cost. Unfortunately, while there have been steady price
17 declines in consumer electric vehicles since the transition deadlines
18 were set in 2022, ZEBs still cost two to four times more than tradi-
19 tional internal combustion engine (ICE) buses, and the average cost of a
20 ZEB has increased by 8.7%. In addition, three years ago experts forecast
21 parity between the total cost of ownership for ZEBs and ICEs to occur by
22 2027, but now the forecast has extended to 2030 or beyond. Because the
23 high cost for adding transmission and charging infrastructure to accom-
24 modate ZEBs falls predominantly on individual school districts, public
25 support for the transition frequently wanes when voters must choose
26 between spending limited budget dollars on educational expenses or for
27 reducing local tailpipe emissions. There is no real debate for many
28 voters in such a scenario, particularly for rural school districts that
29 have low pupil populations and lots of fresh air, but few resources and
30 high educational needs.

31 To promote a more effective transition with a greater impact sooner,
32 the legislature finds that the state must initially concentrate the
33 funding allocated to the transition on school districts with more than
34 two thousand pupils. Within such group of school districts, the state
35 shall then assess which districts, based on their county's childhood
36 asthma ER visit rate, their transition feasibility analysis, SED's
37 need/resource capacity index rating and per pupil spending, shall be
38 prioritized to receive transportation and building aid relief for the
39 purchase of additional transmission capacity and/or ZEBs and the design
40 and construction of related infrastructure. Data indicates that, to
41 date, only thirty-one of New York state's seven hundred thirty-one
42 school districts have sought voter approval to purchase ZEBs. Voters in
43 eight of the thirty-one districts voted "no."

44 Upon review of all thirty-one school districts which voted, certain
45 patterns have emerged:

46 1. Districts with fewer than 2000 pupils voted "no" to ZEBs more
47 frequently. Of the eight school districts which voted "no" to ZEBs, six
48 have fewer than 2000 pupils and five of those six districts are rural
49 districts.

50 2. Rural districts with a "high" need/resource capacity index voted
51 "no" more frequently. Of the five rural school districts that voted
52 "no", SED categorizes four of those districts as "high" on its
53 need/resource capacity index, with the fifth district categorized as
54 "average".

55 3. DOH does not quantify childhood asthma ER visit rates as "high"
56 concern in the counties of most rural districts. Four of the five rural

1 school districts which voted "no" to ZEBs (with the exception of
2 Edwards-Knox Central School District in St. Lawrence County) are located
3 in counties of "low" concern for childhood asthma ER visit rates. (Per
4 DOH, St. Lawrence County is of "moderate" concern.) Of the six school
5 districts with less than 2000 pupils that voted "no", Mexico Central
6 School - located east of SUNY Oswego along Lake Ontario - was the only
7 suburban school district, however, it is located in a county with "low"
8 concern for childhood asthma ER visit rates.

9 Further patterns emerge when one contrasts the "no" votes with the
10 "yes" votes.

11 4. Districts with 2000 or more pupils voted "yes" to ZEBs more
12 frequently. Fourteen of the sixteen school districts with 2000 or more
13 pupils voted "yes" to ZEBs. In contrast, only nine of the fifteen school
14 districts with less than 2000 pupils voted "yes". When examining the two
15 districts with 2000 or more pupils which voted "no" - Churchville-Chili
16 Central School District, a suburban district southwest of the City of
17 Rochester, and Baldwinsville Central School District, a suburban
18 district northwest of the city of Syracuse - the votes initially appear
19 to be outliers, as each district has large pupil populations (of 3,688
20 and 5,444, respectively) and is located in a county with "moderate" to
21 "high" concern for childhood asthma ER visit rates. However, as noted
22 below, another characteristic of each of those two districts undoubtedly
23 plays a pivotal role in their voting results.

24 5. Districts with an "average" need/resource capacity index rating and
25 per pupil spending below \$19,500 voted "no" to ZEBs. Each of the four-
26 teen districts with more than 2000 pupils which voted "yes" to ZEBs have
27 "low" or "average" need/resource capacity index ratings and spend more
28 than \$19,500 per pupil. In contrast, the two large districts which voted
29 "no" - Churchville-Chili and Baldwinsville - each with "average"
30 need/resource capacity index ratings and high childhood asthma ER visit
31 rates, both spend less than \$19,500 per pupil. Moreover, unlike small
32 districts which voted "yes" but which have "average" need/resource
33 capacity index ratings with per pupil spending exceeding \$19,500, Bemus
34 Point central school district, a small district with an "average"
35 need/resource capacity index rating and less than \$19,500 per pupil
36 spending, voted "no" to ZEBs.

37 While most school district administrators support the transition to
38 ZEBs, the practical mechanics of the transition are challenging and
39 costly. Administrators and voters alike feel the limitations of their
40 local school district budgets, and as demonstrated by ZEB votes across
41 the state, when put "between a rock and a hard place", voters will
42 consistently prioritize educational spending over transportation spend-
43 ing, even when the community's asthma health risks are high. Large
44 districts with low per pupil spending need financial assistance to help
45 them accomplish the transition. The state can achieve the largest
46 advances in public health in the shortest amount of time if it initially
47 prioritizes allocated funds to districts with 2000 or more pupils, no
48 more than an "average" need/resource capacity index rating, and per
49 pupil spending of less than \$19,500. As a result of such policy priori-
50 ties, large districts with demonstrated feasibility challenges and small
51 districts with less than 2000 pupils will be given additional time to
52 complete their transitions in accordance with their current transition
53 feasibility analysis.

54 § 2. Subdivision 1 of section 3638 of the education law, as added by
55 section 1 of subpart A of part B of chapter 56 of the laws of 2022, is
56 amended to read as follows:

1 1. For the purposes of this section "zero-emission school bus" shall
2 mean a school bus that: is propelled by an electric motor and associated
3 power electronics which provide acceleration torque to the drive wheels
4 during normal vehicle operations and draws electricity from a hydrogen
5 fuel cell or battery; or otherwise operates without direct emission of
6 atmospheric pollutants, provided however that, notwithstanding the fore-
7 going, for the purposes of this section such term shall include a hybrid
8 battery electric bus with a second source of energy for propulsion.

9 § 3. Section 3638 of the education law is amended by adding two new
10 subdivisions 1-a and 1-b to read as follows:

11 1-a. The department shall require every school district to complete a
12 transition feasibility analysis before the end of the current school
13 year as of the effective date of this subdivision, and every five years
14 thereafter, to determine which if any regular routes can feasibly be
15 served by zero-emission school buses, provided that existing feasibil-
16 ity studies completed within the two years preceding the adoption of
17 this subdivision shall meet the requirements of this subdivision. The
18 analysis shall assess each district's transportation needs, current bus
19 routes and alternative routes based on distance, topography, bridge and
20 road infrastructure, average low temperatures, and a minimum end-of-
21 route charge requirement of no less than twenty percent, consider the
22 sufficiency of the school district's electric transmission capacity and
23 infrastructure and assess the availability of and accessibility to state
24 and/or federal funding for the purchase of zero-emission school buses
25 and construction of associated infrastructure.

26 1-b. Within six months of the effective date of this subdivision and
27 annually thereafter, the department, in consultation with the New York
28 state energy research and development authority and department of
29 health, shall develop a list of school districts with two thousand or
30 more pupils and rank their need for transportation and building aid for
31 the purchase of zero-emission buses and transmission capacity and the
32 design and construction of related infrastructure based on an assessment
33 of each such district's current transition feasibility analysis, average
34 per pupil spending, the most recent department of health data regarding
35 the rate of emergency room visits for asthma per ten thousand persons
36 aged zero to seventeen in the county in which such school district is
37 located, and the needs/resource capacity group to which the commissioner
38 has assigned such school district. To maximize the effectiveness of the
39 state's limited pool of aid funding for the transition to zero-emission
40 school buses, the commissioner shall prioritize the award of such allo-
41 cated transportation and building aid to the high need school districts
42 whose transition will likely have the highest positive health impact on
43 the highest number of students.

44 § 4. Subdivision 2 of section 3638 of the education law, as added by
45 section 1 of subpart A of part B of chapter 56 of the laws of 2022, is
46 amended to read as follows:

47 2. (a) [~~No later than July first, two thousand twenty-seven, every~~]
48 Every school district with two thousand or more pupils shall, by no
49 later than July first, two thousand twenty-seven, abide by the findings
50 of the district's current transition feasibility analysis, completed in
51 accordance with subdivision one-a of this section, as set forth in this
52 subdivision. If the findings of a school district's transition feasibil-
53 ity analysis indicate that:

54 (i) [~~only purchase or lease zero-emission school buses when purchasing~~
55 ~~or leasing new buses;~~

~~(ii) include requirements in any procurement for school transportation services that any contractors providing transportation services for the school district must only purchase or lease zero-emission school buses when purchasing or leasing new school buses; and~~

~~(iii)] fifty percent or more of all regular routes are not deemed feasible for service by zero-emission school buses, then the school district may continue to operate, maintain or contract for non-zero-emission school buses and receive transportation aid for non-zero-emission school buses purchased or leased to make required transportation runs; or~~

~~(ii) less than fifty percent of all regular routes are not deemed feasible for service by zero-emission school buses, then the school district (A) shall operate, maintain or contract for zero-emission school buses and receive transportation aid for zero-emission school buses purchased or leased for such regular routes as are deemed feasibly serviceable by a zero-emission school bus or for an equivalent percentage of regular routes deemed feasible for service by such buses and (B) may operate, maintain or contract for non-zero-emission school buses for the remaining regular routes and receive transportation aid for non-zero-emission school buses purchased or leased to make required transportation runs for such remaining regular routes.~~

~~(a-1) With respect to any zero-emission school buses operated or maintained by a school district in accordance with the findings of the district's current transition feasibility analysis as set forth in paragraph (a) of this subdivision, such school district shall include requirements in any procurement for the manufacturing or retrofitting of a zero-emission school bus and charging or fueling infrastructure that the components and parts used or supplied in the performance of the contract or any subcontract thereto shall be produced or made in whole or substantial part in the United States, its territories or possessions and that final assembly of the zero-emission school bus and charging or fueling infrastructure shall occur in the United States, its territories or possessions.~~

~~(a-2) Every school district with less than two thousand pupils shall, by no later than July first, two thousand thirty-seven:~~

~~(i) only purchase or lease zero-emission school buses when purchasing or leasing new buses;~~

~~(ii) include requirements in any procurement for school transportation services that any contractors providing transportation services for the school district must only purchase or lease zero-emission school buses when purchasing or leasing new school buses; and~~

~~(iii) include requirements in any procurement for the manufacturing or retrofitting of a zero-emission school bus and charging or fueling infrastructure that the components and parts used or supplied in the performance of the contract or any subcontract thereto shall be produced or made in whole or substantial part in the United States, its territories or possessions and that final assembly of the zero-emission school bus and charging or fueling infrastructure shall occur in the United States, its territories or possessions.~~

~~(b) The commissioner, in consultation with the New York state energy research and development authority and office of general services, may waive the contracting requirements set forth in [subparagraph (iii) of] paragraph [(a)] (a-1) of this subdivision if the commissioner determines that the requirements would not be in the public interest, would result in unreasonable costs, or that obtaining such zero-emission school buses and charging or fueling infrastructure components and parts in the~~

1 United States would increase the cost of a school district's contract
2 for zero-emission school buses and charging or fueling infrastructure by
3 an unreasonable amount, or such zero-emission school busses and charging
4 or fueling infrastructure components and parts cannot be produced, made,
5 or assembled in the United States in sufficient and reasonably available
6 quantities or of satisfactory quality. Such determination must be made
7 on an annual basis no later than December thirty-first, after providing
8 notice and an opportunity for public comment, and be made publicly
9 available, in writing, on the department's website with a detailed
10 explanation of the findings leading to such determination. If the
11 commissioner has issued determinations for three consecutive years that
12 no such waiver is warranted pursuant to this paragraph, then the commis-
13 sioner shall no longer be required to provide the annual determinations
14 required by this paragraph.

15 (c) Any school district which encumbers funds and places an order for
16 a zero-emission school bus prior to July first, two thousand twen-
17 ty-seven, but which does not receive delivery of such bus before such
18 date, shall be deemed in compliance with the provisions of this subdivi-
19 sion.

20 (d) For the purpose of this subdivision, "regular routes" are defined
21 as daily runs to and from a student's home, child care or bus stop to
22 the district school. Routes to transport students off the primary
23 school campus for boards of cooperative educational services (BOCES)
24 programs, special education placements at a distance greater than thirty
25 miles from the district school and to transport homeless students and
26 students to and from extracurricular activities shall be deemed "non
27 regular" routes and exempted from any zero-emission school bus require-
28 ment pursuant to this chapter.

29 § 5. Subdivision 3 of section 3638 of the education law, as added by
30 section 1 of subpart A of part B of chapter 56 of the laws of 2022, is
31 amended to read as follows:

32 3. ~~[No later than July first, two thousand thirty-five, every]~~ (a)
33 Every school district with two thousand or more pupils shall, by no
34 later than July first, two thousand thirty-five:

35 ~~[(a)]~~ (i) only operate and maintain zero-emission school buses; and
36 ~~[(b)]~~ (ii) include requirements in any procurement for school trans-
37 portation services that any contractors providing transportation
38 services for the school district must only operate zero-emission school
39 buses when providing such transportation services to the school
40 district.

41 (b) Every school district with less than two thousand pupils shall, by
42 no later than July first, two thousand forty:

43 (i) only operate and maintain zero-emission school buses; and
44 (ii) include requirements in any procurement for school transportation
45 services that any contractors providing transportation services for the
46 school district must only operate zero-emission school buses when
47 providing such transportation services to the school district.

48 § 6. Subdivision 4 of section 3638 of the education law, as added by
49 section 1 of subpart A of part B of chapter 56 of the laws of 2022, is
50 amended to read as follows:

51 4. A school district may apply to the commissioner, and the department
52 may grant a one-time extension of up to twenty-four months to comply
53 with the requirements of subdivision ~~[two]~~ three of this section. The
54 commissioner shall consider a school district's effort to meet the
55 requirements of subdivision ~~[two]~~ three of this section when granting an
56 extension, including but not limited to, procurement efforts made by the

1 school district, applications for state or federal funds, changes needed
2 to school district operations to meet the requirements of this section,
3 employee training, and receipt of technical assistance, if any. Upon a
4 school district receiving an extension, the New York state energy
5 research and development authority, in consultation with the department,
6 shall provide any additional technical assistance necessary to the
7 district to meet the requirements of subdivision [~~two~~] three of this
8 section.

9 § 7. Subdivision 1 of section 3623-a of the education law is amended
10 by adding a new paragraph a-1 to read as follows:

11 a-1. Zero-emission bus transition feasibility analysis, conducted
12 pursuant to subdivision one-a of section thirty-six hundred thirty-eight
13 of this article;

14 § 8. Paragraph e of subdivision 1 of section 3623-a of the education
15 law is amended by adding two new subparagraphs 1-a and 7-a to read as
16 follows:

17 (1-a) salary for a zero-emission transportation transition planner;
18 (7-a) costs incurred to transport an out-of-service zero-emission bus
19 for storage and repairs;

20 § 9. Subdivision 3 of section 35 of part A of chapter 56 of the laws
21 of 2023 amending the education law relating to contracts for excellence,
22 is amended to read as follows:

23 3. Section nineteen of this act shall expire and be deemed repealed
24 June 30, [~~2036~~] 2041; and

25 § 10. This act shall take effect immediately.
